

# MareFrame

**INNOVATIVE FISHERIES MANAGEMENT**  
- an Aalborg University Research Centre

INNOVATIVE FISHERIES MANAGEMENT  
- an Aalborg University Research Centre

- **IFM is a social science research and advisory centre working with fisheries and marine management and coastal community development.**
- **IFM focuses on questions of governance within an ecosystem-based approach to marine management.**
- **IFM is specialized in cross-disciplinary collaboration and is frequently teaming up with institutions/colleagues from other disciplines in order to develop suitable solutions to the problems in question.**

## Relevant expertise of staff

IFM staff have extensive experience in fisheries management and marine governance management, policy formulation and institutional analysis encompassing issues concerning:

- Anthropology
- Biology
- Economics
- Economic geography
- Environmental science
- Political science
- Project administration
- Sociology

## Contribution to MareFrame

### **WP 1: Co-creation & pathways for implementation**

- Heading task 1.1: Assessment of present institutional structures for providing EAF advice and applying this in fisheries policy and management.

### **WP6: Develop a decision support framework**

### **WP7: Synthesis & training development**

- Heading task 7.1: Assessment of present institutional structures for marine policy-making and associated advice input and task 7.6: Provide a road map for how the decision support system can be implemented to improve fisheries advice in Europe

**Total involvement in MAreFrame: 8 senior and 24 post-doc months**
